Your patch test result indicates that you have a contact allergy to clobetasol-17-propionate. This contact allergy may cause your skin to react when it is exposed to this substance although it may take several days for the symptoms to appear. Typical symptoms include redness, swelling, itching, and fluid-filled blisters.

Where is clobetasol-17-propionate found?
Clobetasol-17-propionate is a topical corticosteroid found in ointments and emollient creams. It is used to treat eczema, psoriasis, and seborrhea dermatitis. It is also highly effective in the treatment of contact dermatitis caused by exposure to poison ivy/oak.

How can you avoid contact with clobetasol-17-propionate?
Avoid products that list any of the following names in the ingredients:

- 21-Chloro-9-fluoro-11beta-hydroxy-16 beta-methylpregna-1,4-diene-3,20-dione 17-propionate
- 21-Chloro-9-fluoro-11beta,17-dihydroxy-16 beta-methylpregna-1,4-diene-3,20-dione 17-propionate
- Clobesol
- Clobetasol 17-propionate
- Clobetasol propionate
- CAS RN: 25122-46-7
