LIDOCAINE-HCL

Your patch test result indicates that you have a contact allergy to lidocaine-HCl. This contact allergy may cause your skin to react when it is exposed to this substance although it may take several days for the symptoms to appear. Typical symptoms include redness, swelling, itching and fluid-filled blisters.

Where is lidocaine-HCl found?

Lidocaine is an anesthetic for local or topical administration. It is found in pain-relief medications and other topical medications such as wound and burn ointments, after sun lotions, ear drops, gels, ointments, and sprays used for sport injuries, mouth- and throat sprays, ointments, and suppositories for hemorrhoids.

How can you avoid contact with lidocaine-HCl?

Avoid products that list any of the following names in the ingredients:
- Lidocaine-HCL
- Lidocaine Hydrochloride
- CAS RN: 6108-05-0
- Xylocaine hydrochloride monohydrate
- 2-diethylamino-N-(2,6-dimethylphenyl)acetamide hydrochloride monohydrate

What are some products that may contain lidocaine-HCl?
