Your patch test result indicates that you have a contact allergy to fragrance mix II. This contact allergy may cause your skin to react when it is exposed to this substance although it may take several days for the symptoms to appear. Typical symptoms include redness, swelling, itching and fluid-filled blisters.

Where is fragrance mix II found?

Fragrance mix II contains the six additional substances that are often found in a variety of products: Coumarine, Lyral, Citronellol, Farnesol, Citral, a-Hexylcinnamaldehyde. Fragrances can be found in most products. They are used to add flavor or scent to a product or may mask a product’s unpleasant smell. They may come from natural (animals or plants) or synthetic sources.

How can you avoid contact with fragrance mix II?
